Customer Problem Statement

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee or end user requiring a network service	Submit a network request with complete and correct information	The request process may be unclear or information may be incomplete	Network requests are handled through different channels without a standardized form	Uncertain whether my request contains all the required information
PS-2	A requester who has submitted a network request	Track the progress and current status of my request	I may not know whether the request is pending approval or being processed	There is limited visibility into the request lifecycle	Confused and uncertain about when my request will be completed
PS-3	A Network Fulfillment Team member	Receive and process network requests efficiently	Requests may require manual checking and assignment	Request details, approvals, and fulfillment activities are not automatically connected	Delayed and burdened with manual work

Define the Problem Statement

USER

Employees and users requesting network-related services such as Wi-Fi, LAN, VPN, or other connectivity services.

PROBLEM

Network service requests may be handled through unclear or unstructured processes, leading to incomplete request information and delays in processing.

NEED

A guided ServiceNow-based network request process that captures complete request information and standardizes request submission.

IMPACT

Incomplete or unclear network requests can cause delays in approval, task assignment, and network service fulfillment.

HOW MIGHT WE?

How might we provide employees with a simple and centralized ServiceNow experience that captures complete network request information and automates the approval and fulfillment process?
